

9. วิธี set auto release branch

copy + paste

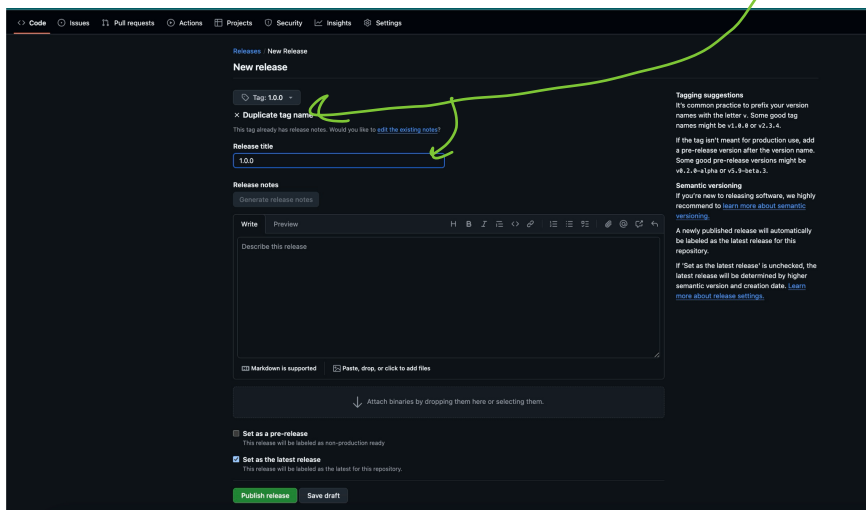

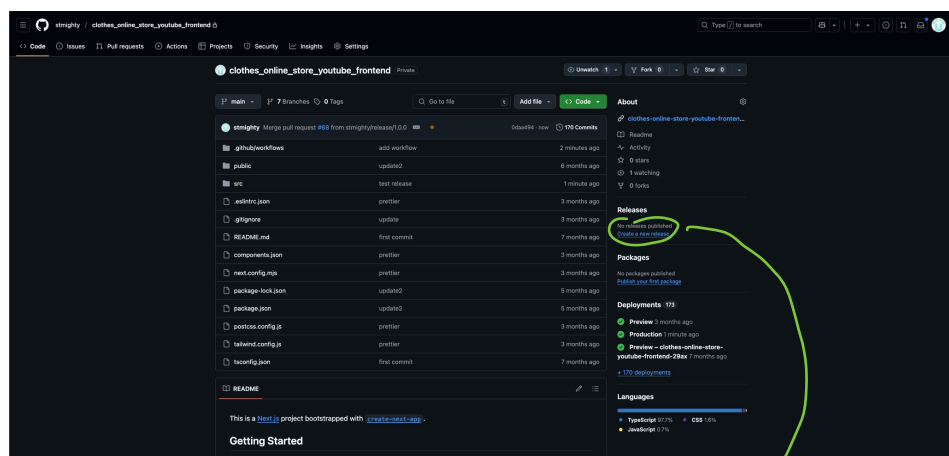

```
1 name: auto-tag-release
2
3 on:
4   pull_request:
5     types: [closed]
6     branches: [main]
7
8 permissions:
9   contents: write
10
11 jobs:
12   tag:
13     if: |
14       github.event.pull_request.merged == true &&
15       startsWith(github.event.pull_request.head.ref, 'release/')
16     runs-on: ubuntu-latest
17     steps:
18       - uses: actions/checkout@v4
19         with: { fetch-depth: 0 }
20
21       - name: Configure git identity
22         run: |
23           git config --global user.email "${{ github.actor }}@users.noreply.github.com"
24           git config --global user.name "${{ github.actor }}"
25
26       - name: Set VERSION env
27         id: vars
28         run: |
29           # ${{ github.event.pull_request.head.ref }}
30           VER="${{ github.event.pull_request.head.ref }}"
31           VER="${VER%release/}" # ${{ github.actor }}
32           echo "VERSION=${VER}" >> $GITHUB_ENV
33
34       - name: Create & Push Tag
35         run: |
36           git tag -a "$VERSION" -m "Release $VERSION" "${{ github.event.pull_request.merge_commit_sha }}"
37           git push origin "$VERSION"
38
39       - name: Generate changelog
40         id: changelog
41         run: |
42           PREV_TAG=$(git describe --tags --abbrev=0 "$VERSION" 2s/dev/null || echo "")
43           if [ -z "$PREV_TAG" ]; then
44             LOG=$(git log --pretty=format:"- %s")
45           else
46             LOG=$(git log "$PREV_TAG"..HEAD --pretty=format:"- %s")
47           fi
48           echo "LOG<<EOF" >> $GITHUB_OUTPUT
49           echo "$LOG" >> $GITHUB_OUTPUT
50           echo "EOF" >> $GITHUB_OUTPUT
51
52       # 3) Create GitHub Release
53       - name: Create GitHub Release
54         uses: softprops/action-gh-release@v2 # ${{ github.actor }}
55         with:
56           tag_name: ${{ env.VERSION }}
57           name: ${{ env.VERSION }}
58           body: ${{ steps.changelog.outputs.LOG }}
59           env:
60             GITHUB_TOKEN: ${{ secrets.GITHUB_TOKEN }}
```

ครั้งต่อไป

Format : release/x.y.z

merge release/x.y.z เข้า main

ไม่แน่ใจว่าเฉพาะครั้งแรกหรือไม่ต้องทำก็ได้
