

How to create personal repository

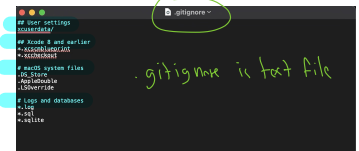

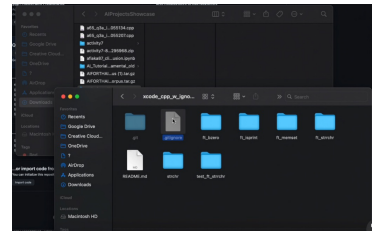

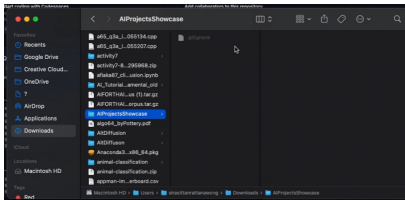

1. create new repository and folder on your local machine
(need not to be the same name)

2. Create .gitignore file (it need to be this name)
place it **in** the folder you want to connect to git

(You can copy from this)

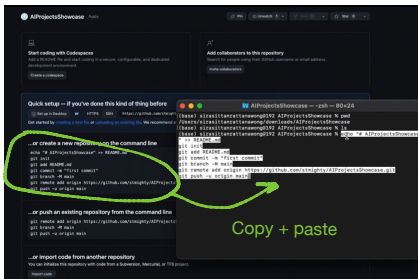

It is hidden file you need command + shift + "."

what is .gitignore : <https://www.freecodecamp.org/news/gitignore-what-is-it-and-how-to-add-to-repo/>

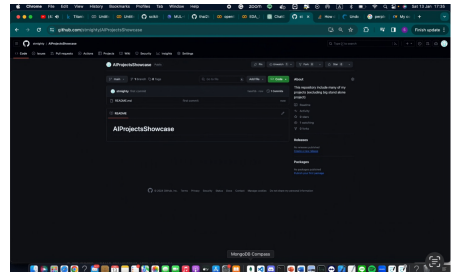

example of .gitignore file : <https://github.com/github/gitignore/blob/main/Global/macOS.gitignore>

3. cd to the directory of your project

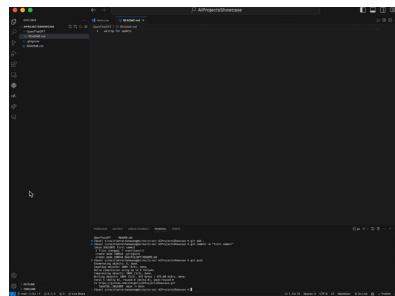

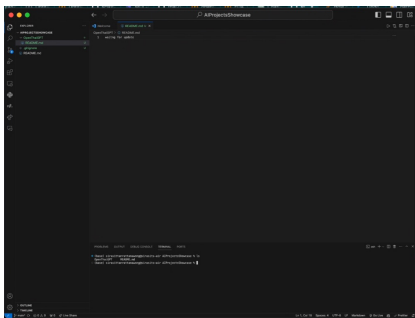

```
AIProjectsShowcase ~
Start coding with CodeSandbox
Add collaborators to this repository
Quick setup — if you've done this kind of thing before
git init
git add .
git commit -m "first commit"
git push -u origin main
...or create a new repository using the command line
mkdir ~/my-project
cd ~/my-project
git init
git add .
git commit -m "first commit"
git push -u origin main
...or push an existing repository from the command line
git remote add origin https://github.com/yourusername/AIProjectsShowcase.git
git push -u origin main
...or import code from another repository
git clone https://github.com/yourusername/AIProjectsShowcase.git
cd AIProjectsShowcase
```

then in GitHub

4. In viscode try to create new file then
git add .
git commit -m "first commit"
git push

In github
